ARSENIY ROGOVOY

Senior / Lead Unity Developer (C#) | Architecture, Gameplay, UI, Live-Ops, Performance

Riga, Latvia (EU) · EET (UTC+2/+3) · Available now, full-time · Remote B2B (VAT-registered Latvian business)
mrkvinter.github.io · linkedin.com/in/arseniy-rogovoy · github.com/mrkvinter

SUMMARY

Senior Unity developer working in games since 2017, with 10 years of C# overall. Experienced in game architecture and UI systems, live-ops and meta features for F2P mobile and PC games, online co-op networking and open-world streaming performance, plus the tools and CI that help a team move fast. Takes on lead duties: task breakdown, code reviews, technical interviews. Part-time founder of Kvinter Games and sole engineer on its Steam roguelite Die to Play (release in 2027, ~3,000 wishlists).

SELECTED TITLES

- **Warhammer 40,000: Rogue Trader** (Owlcat Games): gameplay logic, dialogue and localization tools
- **Hello Engineer** (tinyBuild): 4-player online co-op; custom networking, architecture
- **Questbound** (Perfect Play, Playrix group; mobile): gameplay features, internal tools, CI
- **Gladiators: Survival in Rome** and **Daisho: Survival of a Samurai** (Colossi Games; iOS, Android, PC; 1M+ Google Play downloads each): live-ops, meta and UI systems
- **Divide By Sheep 2** (tinyBuild; iOS, PC): UI and level logic, analytics, tools

EXPERIENCE

Senior Unity Developer (B2B contract) | tinyBuild
Apr 2026 – Sep 2026 · Open-world game (NDA)

- Optimized open-world level streaming with async loading, time-slicing across frames and object pooling, so new areas load without frame-time spikes.
- Built debug tools: a runtime panel (time scale, FPS limit, log levels per channel) and a save browser that starts the game from any saved state.
- Implemented gameplay mechanics, a few UI windows and localization.

Founder and Lead Developer | Kvinter Games (own indie studio)
Nov 2024 – present · Part-time · Die to Play: dice deckbuilding roguelite, Unity 6 (URP), Steam release in 2027

- Sole engineer, leading a team of 5; the game has ~3,000 Steam wishlists and ~250 playtesters so far.
- Built the game: 2D dice battles inside a first-person 3D room, on a modular architecture (VContainer DI, MessagePipe event bus, UniTask) with ~250 unit tests.
- Built a headless balance simulation: a bot calibrated on ~1,500 playtester fights plays the real game at 100x speed (~1,000 runs in 40 min). A 3,700-run test showed only 11 of 35 items significantly affect win rate; the bot also exposed race conditions and hangs, since fixed.
- Built event-driven analytics (PostHog, GameAnalytics, Sentry) with progression funnels, plus a Steam release pipeline (main, playtest, demo) and a 9-language localization pipeline.

Senior Unity Developer | Perfect Play (Playrix group)
Apr 2024 – Apr 2026 · Questbound: mid-core hero battler for mobile (soft launch)

- Delivered features end to end, including Resonance, Shards, Battle Route and MVP & Battle Stats: task breakdown, gameplay logic, UI and animation, server integration.
- Reviewed code, broke down tasks for other developers, and maintained code-style and validation tools.
- Stabilized CI/CD on TeamCity: fixed failing builds and tests, and sped up the build process.
- Built internal tools (cheat panel and commands, MessagePack data viewer) and improved logging and profiling.
- Reduced crashes and freezes by profiling and optimizing scripts and timers; fixed blockers and regressions; integrated analytics.

Senior Unity Developer | Colossi Games
Sep 2022 – Dec 2023 · Gladiators: Survival in Rome, Daisho: Survival of a Samurai (F2P action RPGs; iOS, Android, PC)

- Built live-ops and meta systems: ranking, battle pass (logic and UI), perks and attributes, inventory, game events.
- Wrote gameplay logic in shared code that runs on both client and server, plus some server-side code.
- Implemented player abilities and UI; built editor tools for designers.
- Led work on individual features and reviewed code.

Unity Developer (B2B contract) | tinyBuild
Sep 2022 – Jul 2023 · Part-time · Divide By Sheep 2 (iOS, PC; released 2024)

- Developed UI and core level logic, analytics and crash reporting; built internal tools.
- Made targeted architecture improvements and moved game configs to my own data-driven Content System.

Senior Unity Developer | Owlcat Games
Oct 2021 – Jan 2022 · Warhammer 40,000: Rogue Trader (CRPG, in development)

- Developed and refined core logic of the stealth system.
- Polished the internal dialogue editor UI and automated dialogue export to spreadsheets for localization.

Senior Unity Developer | tinyBuild
Jan 2020 – Oct 2021 (promoted from Unity Developer in Jan 2021) · Hello Engineer: 4-player online co-op (Stadia, 2021)

- Refactored a monolithic codebase into modules: faster feature work, easier debugging, fewer merge conflicts.
- Built core systems (player state machine, host-client networking on top of a low-level network library, UI), plus a test framework and tests.
- Helped lead the team: broke down, estimated and assigned tasks; conducted technical interviews.
- Introduced Gitflow, CI, code reviews, story points and retrospectives.

Earlier Experience
2016 – 2019

- **Freelance Unity Developer** (May 2017 – Dec 2019, part-time until mid-2019): casual mobile game (architecture, ad and analytics SDKs); co-developed an early FPS prototype (architecture, enemy AI, UI).
- **C#/.NET Developer, SKB Kontur** (Jul 2016 – Jun 2019): desktop (WinForms, WPF) and cloud (ASP.NET) apps for a large B2B software vendor.

SKILLS

- **Unity and C#:** Unity 6, URP, C#/.NET, ScriptableObjects, Addressables, uGUI, UI Toolkit (tools), DOTween, FMOD
- **Architecture:** modular assemblies, DI (Zenject, VContainer), event bus (MessagePipe), state machines, MVU/MVP/MVVM, data-driven content, code generation, UniTask, R3, MessagePack
- **Gameplay and live-ops:** meta and progression systems, battle pass, rankings, game events, inventory, abilities, enemy AI
- **Multiplayer:** custom host-client networking, shared client/server gameplay code, server integration
- **Performance:** Unity Profiler, async loading, time-slicing, pooling, level streaming, crash and freeze fixes
- **Tools and pipelines:** editor and debug tools, CI/CD (TeamCity), Git, Steam (steamcmd), localization, ads/analytics SDKs, AI coding tools (Claude Code, Codex)
- **Data and testing:** PostHog, GameAnalytics, Sentry, NUnit, headless balance simulation (Python, pandas)

PROJECTS

- **Content System**: my C# framework for data-driven game content (typed references, code-generated constants); used in Divide By Sheep 2 and Die to Play
- **Sharp.Compose**: declarative UI framework for C#, inspired by Jetpack Compose (MVU). github.com/mrkvinter/sharp.compose
- **TextAnimations**: Unity library for expressive text animations; **Itch.io Tag Explorer**: web tool for itch.io tag rankings
- **Ludum Dare** (solo 48-hour Compo): KingdomOS placed #8 Overall and #8 Fun of 404 entries (LD56); also #24 (LD59) and #42 (LD57)
- Die to Play on Steam: store.steampowered.com/app/3784360 · games and jam entries: mrkvinter.itch.io

EDUCATION AND LANGUAGES

- BSc in Mathematics and Computer Science, Ural Federal University (2014–2019)
- Russian: native · English: working proficiency · Latvian: A2
